

BED-TYPE UNIVERSAL CNC MILLING MACHINE

HO CHUN

MODEL : UH-1250A

High Precision, High Rigidity and High Stability Reliable..... Bed- Type Universal CNC Milling Machine

HO CHUN Bed-Type Universal CNC Milling Machines can be milled at the highest efficiency. It can do the most precise machining easily. Even under the situation of doing heavy milling, its stability still can be reliable. The latest engineering technic and the most precise CNC Controller System compose HO CHUN Bed Type Universal CNC Milling Machines - the most Cost - Benefit Milling Machines.

HORIZONTAL MILLING

- A. Upper 0°
Lower 0°
- B. Upper 180°

FEATURES:

1. HO CHUN CNC Milling Machines have simple , convenient and colourful dialogues screens. There are clear and simple instructions on the screens. By easy instructions and Teaching Program (TNC), machines can be easily and gradually operated by operators.
2. We select Heidenhain CNC Controller to match with HO CHUN Milling Machines is for its ideal program. RS-232-C Interface is adopted to Controller and outward programming can be finished by it.
3. Operators can imitate the diagram for the machining workpiece on the screen under every program section. By making confirmation in advance, program can be setted as correct and suitable as possible. You can select / change three kinds of different drawings at your will- Three View Drawing, Shadow Plain View Drawing which can display depth and the Third Space Pictorial Drawing- to show its model.
4. Measuring Probe (Optional Accessories) can enhance machines to High Speed Digitalized.
5. Heidenhain TNC Controller System is prospective. It can improve the quality of High- Speed Contour Line Drawing and shorten machining time.

FEATURES:

1. 3 Axes are used Ballscrew and AC Servo System.
2. Hardware will diagnose and test the system's situation in advance and which will be displayed on the screen in starting machines.
3. By adopting Modular PCB Board , operators can maintain and replace it by themselves.
4. Indicators , lie in every PCB Board, will make operators observe the status of PCB Board easily.
5. LEADJECT Controller System can imitate program for machining X-Y and Z-X and can be displayed in 3D situation.
6. NC Program is written in G/M/F/S/T code and compatible with FANUC and MITSUBISHI System. It is easily to be learned and can be written with PC computer.
7. RS-232C connects with CAD/CAM System. By having RS-232C, operators can transfer and machine at the same time. (The Highest Transmission Efficiency is 9600BPS.)
8. Machining Program can be kep in 3.5 inch Soft-Disk or 720k Memory Card.(1800 metre)
